WASEL — F6 — Locked Hero Story

Canonical demo path · Preserve this story unless Omar approves a change

Purpose. This document fixes the hero demonstration narrative for the Wasel prototype. It is a demo scenario, not evidence of a real customer interaction.

Locked product

casque bluetooth

Core story

A customer places an order for a Bluetooth headset. The customer gives only a vague rural/douar location, says the price feels high, is not always at home, and is unsure about proceeding. The seller asks for the exact address using the final F4 T_ADDRESS template. The customer then confirms and supplies a named street, house number, landmark, and delivery time.

The intended product demonstration is the change in risk assessment after the customer provides resolving information: official hero score 87 (HIGH) → 16 (LOW).

Do not replace these official scores with retired values. Do not claim the scenario is a real customer case.

Canonical sequence

Step	Story beat	Must remain true
1	Order begins	Product is casque bluetooth.
2	Vague location	Customer describes a rural/douar location, e.g. “9rib el jemaa”; this is not an exact address.
3	Concerns appear	Customer says the price is high, is not always home, and is unsure.
4	Seller asks	Use the final F4 T_ADDRESS template to request the exact address.
5	Customer resolves	Customer confirms and provides street, house number, landmark, and delivery time.
6	Rescore	Show the official result: 87 (HIGH) → 16 (LOW).

Locked final customer reply

ey behi. Douar Ouled Ali, triq el jemaa, dar 14, el bab lazra9 9odem el pharmacie. ghodwa ba3d 17h nkoun fi dar

This final reply contains the location details and availability information needed for the story. Keep the same facts if adapting the wording for recording.

Demo and recording checklist

☐ Use the product name “casque bluetooth”.

☐ Keep the initial location vague and rural/douar-based.

☐ Include all three customer concerns: price feels high, not always home, unsure.

☐ Use the final F4 T_ADDRESS template for the seller's address request.

☐ The final customer response includes street, house number, landmark, and delivery time.

☐ Display 87 (HIGH) before the resolving reply and 16 (LOW) after it.

☐ Label the interaction as a demo/synthetic scenario; do not imply it is a real customer.

☐ Do not change the locked story without Omar's approval.

Do not invent

Do not add unsupported customer details, delivery guarantees, real-world outcome claims, or new score values. If the UI requires details not specified here, flag them for the technical team rather than silently making them part of the canonical story.

Source alignment: prepared from the FEDI work-plan requirements for F6 and the locked hero scenario.
